

# Helical Anchor Extensions

ECP helical anchor extensions are provided to allow the helical lead sections to reach optimal depths of load bearing stratum. Available in standard lengths ranging from 3' to 10' these extensions enhance the helical anchors versatility by providing unlimited depth to meet jobsite requirements. Custom lengths are available for specific jobsite specifications.

To achieve design requirements additional helix flights can be added to extensions greatly increasing bearing capacities. Standard and custom flight configurations are available upon request.

## ECP Helical Anchors Provide:

- Ease of Installation
- Little to No Vibration
- Immediate Load Transfer upon Installation
- Installed Torque Correlates to Capacity
- Easily Load Tested to Verify Capacity
- Installs Below Active Soils
- All Weather Installation
- Little to No Disturbance to Jobsite
