Helical Anchors Manufactured by ECP Utility

Helical piles and anchors have long been a economical solution to difficult foundation requirements. The ability to perform in compression and tension applications makes helicals an ideal fit for the demanding utility industry. From self supporting towers to guy wire applications helical perform in all types of soils supporting all types of loads.

We offer a variety of helical anchors ranging from our PITA round rod guy anchors to our 4-1/2" tubular helical used for deep foundation applications. With a variety of sizes and configurations ECP Utility can match your needs with our anchors. Our Engineering Department is standing by to help from conception to completion for civil and structural engineers. A complete description of our helical anchors is available in our Design and Technical Service Manual, or call today to speak with our staff.

Utility Products are Engineered for:

- Guy Wires
- Platform Supports
- Transmission Towers
- Parking / Street Lighting
- Pipelines
- Wind Turbines
- Monopoles
- Foundation Support
- Solar Panels
- Telecom Towers

With more than a 40 year track record, helical ground anchors have revolutionized the utility transmission and distribution industry by providing a quick, cost competitive and verifiable solution to utility professionals throughout the world. ECP Utility helical anchors provide a verifiable foundation element for tension and compressive applications for telecom towers, utility poles, transmission and distribution lines, solar panel and wind tower foundations. Don't wait, call the steel utility foundation experts today.

Whether you need ground anchors for new tower applications or repairing existing lines and support structures, your solution is just a phone call away at 855.650.2211. From across the country, engineers and utility contractors rely on ECP Utility helical foundation products to solve their foundation stabilization needs.
