Transmission Helical Anchor Products

Transmission Helical Anchor Products

Helical Torque Anchors are a part of the complete product line of helical piers, piles and steel foundation products manufactured by Earth Contact Products, LLC, based in Olathe, Kansas. ECP Utility offers helical anchors in various capacities and configurations for all aspects of the utility industry. From square bar and round shaft helical anchors to our PITA anchors for guy anchors, ECP has the helical anchor and accessories it fit the needs of the electric transmission power industry. The use of helical anchors as deep foundations has decreased installation times and increased job site performance due to their verifiable capacities.

For years the electric transmission industry has relied on helical anchors for tower and pole foundations as well as guy anchors. Being the largest consumer of helical anchors the electric power transmission industry has embraced helical anchors for their many benefits and reliable performance.

Transmission Anchor Accessories

Adapting helical anchors to various above grade apparatuses is essential to provide a full service to the power industry. Various beams, grillage, etc. can be attached to the helical piles to resist structures from overturning forces. ECP Utility specializes in custom foundation connections to adapt our helical anchors to a variety of foundation needs. The Engineering Department of ECP Utility is available to recommend and facilitate the correct helical anchor for jobsite specific needs.

ECP recommends that only a registered engineer design and oversee the application of helical anchors when used in foundation repair or new construction projects.
