Drain Pipe

The ECP 400 Series Drain Pipe is the industry leading rigid drainage system for use on interior and exterior foundation drains, curtain and landscape drains, retaining walls, crawlspace and any other sub-surface water management applications. This drainage system is strong easy to use and environmentally friendly. The ECP 400 Series drainage system utilizes the time proven principals used in French Drain systems while eliminating the problems inherent other pipe coupling systems.

The ECP 400 Series Drain Pipe is available in perforated and non-perforated form that can be mixed and matched to provide superior drainage solutions. The rigid non-perforated version will move water away from the foundation without leaching into the soil, while the perforated version can be used to remove puddle water or to disperse water back into the soil once it has been safely moved away from the foundation.

This drain pipe can be used in exterior or interior applications. The 400 Series drain pipe has superior crush resistance and exceptional water volume capacity while conforming to current building codes for commercial and residential applications. As an interior water management system the ECP 400 Series Drain Pipe will remove water from underneath the slab and when used in combination with the ECP Water Channel it will remove unwanted water from the wall and footing cold joint. When used as an exterior foundation drain.

Advantages of 400 Series Drain Pipe

- Building Code Approved
- Superior Water Volume Capacity
- Belled Connection Ends
- Perforated and Non-Perforated Pipe
- ASTM Compliance

The ECP 400 Series Drain Pipe is uniquely engineered to withstand the crushing forces of soils and concrete while maintaining its smooth shape for maximum water flow. ECP recommends that non-woven geotextile fabric be used with its drain system to prevent potential clogging. Pipe and stone systems have been used since the invention of the French Drain system, by Henry French, to control basement and crawlspace water management. The ECP drain system improves upon the French Drain by providing superior connections and a crush resistant makeup to provide years of superior flow characteristics.
